1**Overview of directional seated valve type VP**

Directional seated valves are a type of directional valve. Their function is to direct the flow of hydraulic medium in certain directions, therefore connecting the relevant connections, or shutting off the flow with zero leakage. By this means they control the movement of the actuators in a hydraulic system.

The directional seated valve type VP is a manifold mounting valve. It is a cone-seated valve. 2/2, 3/2 and 4/2 directional seated valves with different types of actuation are available. All connections can be subjected to the same pressures.

The directional seated valve is suitable above all for highly viscous media (e.g. lubricating grease). Appropriate connection blocks enable direct pipe connection.

Features and advantages

- Suitable for highly viscous media (e.g. lubricating grease)
- No interaction between actuating elements and media
- Any flow direction
- Explosion-proof version
- Can be combined with sub-plates for directional seated valves size 12

Intended applications

- Lubricating systems
- Hydraulic presses
- Wind power plants
- Mining machinery
- Construction and construction materials machinery
- Handling and assembly technology

T	Mechanical (sensing pin)	400	Actuation force: $F_B = 51 \dots 57$ N	
F	Manual (sensing lever)	400	Actuation force: $F_B = 25 \dots 28$ N	
D	Manual (rotary knob)	400	Actuation torque: $M_B = 63$ Ncm	

Further technical data, see Chapter 3.6, "Technical data - Further actuations"

3 Parameters

3.1 General data

Designation	2/2, 3/2 and 4/2 directional seated valves
Design	Cone-seated valve
Model	Individual valve for manifold mounting
Material	Steel; electro-galvanised valve housing; zinc-nickel coated coil housing
Attachment	Base plate assembly without/with connection block
Overlap	Negative, transition from one flow direction to the other is completed only at the stroke end position. During switching, all passages are connected to each other.
Installation position	Any; vertical with actuation upwards preferred
Flow direction	Any, see Chapter 2.2, "Circuit symbols"
Hydraulic fluid	Lubricating greases from NLGI grades 000 ... 2 to DIN 51 818 based on mineral oil and synthetic oil at operating temperatures up to approx. +70°C. Hydraulic fluid, according to DIN 51 524 Parts 1 to 3; ISO VG 10 to 68 according to DIN ISO 3448 Viscosity range: 4 - 800 mm ² /s Optimal operating range: approx. 10 - 200 mm ² /s Also suitable for biologically degradable hydraulic fluids type HEPG (polyalkylene glycol) and HEES (synthetic ester) at operating temperatures up to approx. +70°C.
Cleanliness level	ISO 4406 <u>21/18/15...19/17/13</u>
Temperatures	Environment: approx. -40 to +80 °C, hydraulic fluid: -25 to +80 °C, pay attention to the viscosity range. Start temperature: down to -40 °C is permissible (take account of the start viscosities!), as long as the steady-state temperature is at least 20 K higher during subsequent operation. Biologically degradable hydraulic fluids: note manufacturer specifications. With consideration for the seal compatibility, not above +70°C.
	<div style="border: 1px solid gray; padding: 5px;"> <p>! NOTICE Observe the correct duty cycle, see Chapter 3.5, "Electrical data" Note restrictions on explosion-proof solenoid.</p> </div>
Outdoor use	Comparative protection type of mechanical part IP 40 (IEC 60529)

! **NOTICE**
Standard seals NBR

3.2 Pressure and volumetric flow

Operating pressure	$p_{max} = 400 \text{ bar}$, 250 bar for the solenoid X 24 EX 55 FM and X(G)M 24/18W, all connections can withstand the full operating pressure.
Flow rate	$Q_{max} = 15 \text{ lpm}$ Values are for hydraulic fluid
Static overload capacity	approx. $2x p_{max}$, applies when the valve is in the rest position

3.3 Weight

Valve complete with actuation	Coding	
	solenoid actuation XM, GM, LM	
	R, S, Z	= 0.7 kg
	G	= 1.0 kg
	W	= 1.0 kg
	hydraulic H

i INFORMATION
The electrical data for GM solenoids and WGM solenoids are reference values (max) and may vary slightly depending on the values stipulated by the manufacturer.

Switching times	on: 100 ms off: 50 ms (G..) and 125 ms (WG..)
Switching operations	Approx. 2000/h, to be seen as approximately evenly distributed
Insulation material class	F
Contact temperature	Contact temperature at 20°C, ambient temperature: approx. 85°C ... 95 °C (cladding). In adhering to the reference values for % duty cycle in operation, the permissible winding limit temperature of approx. 150 °C according to insulation material class F is approximately reached as a steady-state temperature. The thermal load on the coil can be reduced by means of an economy circuit, for example.
other solenoid voltages	Special voltages and plug options upon request

Relative duty cycle
100% duty cycle (specified
on solenoid)

Relative duty cycle

$$t_r = \frac{t_{on}}{T} \cdot 100 (\% ED)$$

- 1 t on (switch-on time)
- 2 T (cycle time)

! NOTICE

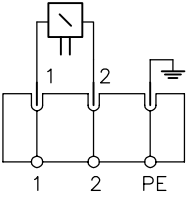

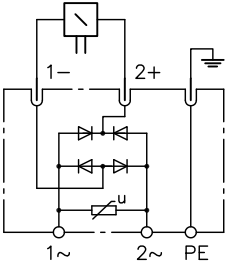

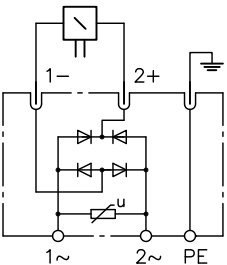

The thermal load on the coil can be reduced by means of an economy circuit, for example. For block circuits and ambient temperatures higher than 40 °C, avoid placing solenoid valves that are switched on for long periods directly alongside each other!

Protection class Depending on the actuating solenoid see Chapter 2.4.1, "Solenoid voltage and connectors"

Electrical connection Depending on the actuating solenoid see Chapter 2.4.1, "Solenoid voltage and connectors"

Cut-off energy approx. < 1 Ws of reference value from measurements at nominal voltage U_n

Protective circuit	
Protection class (minimum requirement, depending on the cable fitting and cable)	
Electrical protection against overload (according to IEC 60127)	see B 40/2017 operating instructions/declaration of conformity for explosion-proof solenoid EX22 and B ATEX operating instructions for HAWE devices intended for use in potentially explosive atmospheres
Relative duty cycle The duty cycle ED [%] depends on the ambient temperature and the cable type being used. For the definition of the duty cycle [%]: see B ATEX , Chapter 2.3 "Safety instructions"	
Ambient temperature	
Max. medium temperature	
Surface protection	<ul style="list-style-type: none"> ▪ Electrogalvanised housing ▪ Zinc-nickel coated housing
Cable kits	For cable kits with cable and cable fitting, see B ATEX operating instructions for HAWE devices intended for use in potentially explosive atmospheres
Dimensioning Sub-plates	<p>Single valve VP 1 R,S,Z: Block volume 65 250 mm³, block dimensions 29 mm x 45 mm x 50 mm</p> <p>Linking, adjacent single valves VP 1 R, S, Z: Block volume 57 500 mm³, block dimensions 25 mm x 46 mm x 50 mm linking width 46 mm</p> <p>Single valve VP 1 G: Block volume 120 000 mm³, block dimensions 40 mm x 50 mm x 60 mm</p> <p>Single valve VP 1 W: Block volume 120 000 mm³, block dimensions 50mm x 80mm x 100mm</p>

 **CAUTION**
Shield against direct sunlight.

 **NOTICE**
For electric version and certification, see [B 40/2017](#) operating instructions/declaration of conformity for explosion-proof solenoid EX22

 **CAUTION**
The excitation and actuating systems are paired and must not be mixed up or replaced under any circumstances!

 **CAUTION**

- Take particular care during assembly and dismantling work!
- The surfaces must not be damaged under any circumstances!

3.6 Technical data - Further actuations

Coding	Actuation	Description
H	Hydraulic	The actuating element is a single-acting pilot piston with a spring return. The switching position a is maintained as long as the pilot pressure is present. If the pilot pressure is relaxed to < 1 bar the valve automatically reverts to the default position 0. The pilot piston is sealed for zero leakage.
		Pilot medium Hydraulic fluid
		Pilot pressure max = 700 bar min = 12 bar
		Pilot volume 0.4 cm ³
		Temperature -40 ... +80 °C (ambient and pilot medium)
P	Pneumatic	The actuating element is a single-acting pilot piston with a spring return. The switching position a is maintained as long as the pilot pressure is present. If the pilot pressure is released the valve automatically reverts to the default position 0. The pilot piston is sealed for zero leakage.
		Pilot medium Compressed air, oiled and filtered
		Pilot pressure max = 15 bar min = 4 bar
		Pilot volume 1.0 cm ³
		Temperature -20 ... +70 °C (ambient and pilot medium)
K, T	mechanical	The actuating element is a sensing pin with spring return. If the actuating movement is vertical it is employed directly, if the actuating movement is horizontal it is employed via a sensing roller. The valve is in switching position a when the actuating element is depressed by the means of actuation over the range of the stroke travel (see dimensional diagrams Chapter 4.1.2, "Further actuations").
		Switching force = 25 ... 28 N (coding K) = 51 ... 57 N (coding T)
		Switching travel see dimensional diagrams Chapter 4.1.2, "Further actuations"
F	manual	The actuating element is a sensing lever which acts on a sensing pin that is equipped with a return spring. Switching position a is maintained as long as the sensing lever is depressed.
		Switching force = 25 ... 28 N
		Switching travel see dimensional diagrams Chapter 4.1.2, "Further actuations"
D		Actuating element with detent position. The switching position a or 0 is achieved by rotating the knob a further 90° in any direction.
		Switching torque = 63 Ncm
		Switching travel see dimensional diagrams Chapter 4.1.2, "Further actuations"

4 Dimensions

All dimensions in mm, subject to change.

5 Installation, operation and maintenance information

Observe the document B 5488 "General operating instructions for assembly, commissioning, and maintenance."

5.1 Intended use

This product is intended exclusively for hydraulic applications (fluid technology).

The user must observe the safety measures and warnings in this document.

Essential requirements for the product to function correctly and safely:

- ▶ All information in this documentation must be observed. This applies in particular to all safety measures and warnings.
- ▶ The product must only be assembled and put into operation by specialist personnel.
- ▶ The product must only be operated within the specified technical parameters described in detail in this document.
- ▶ All components must be suitable for the operating conditions when using an assembly.
- ▶ The operating instructions for the components, assemblies and the specific complete system must also always be observed.

If the product can no longer be operated safely:

1. Remove the product from operation and mark it accordingly.
 - ✓ It is then not permitted to continue using or operating the product.

5.2 Assembly information

The product must only be installed in the complete system with standard and compliant connection components (screw fittings, hoses, pipes, fixtures etc.).

The product must be shut down correctly prior to disassembly (in particular in combination with hydraulic accumulators).

DANGER

Sudden movement of the hydraulic drives when disassembled incorrectly

Risk of serious injury or death

- ▶ Depressurise the hydraulic system.
- ▶ Perform safety measures in preparation for maintenance.

5.2.1 Replacing the solenoid

- 1 O-ring 18.75x2.62 NBR 90 Sh
- 2 O-ring 28.00x1.50 NBR 90 Sh
- 3 Solenoid

Solenoid: see Chapter 6.2, "Accessories, spare and individual parts"

5.2.2 Adjusting the plug position

Plug position can be adjusted individually:

- ▶ Undo the fastening nut, Undo the manual override at the size 6 hex socket.
- ▶ Position the coil.
- ▶ Tighten the fastening nut, Re-tighten the manual override at the size 6 hex socket.

- 1 Fastening nut

5.3 Operating instructions

Observe product configuration and pressure/flow rate.

The statements and technical parameters in this document must be strictly observed.

The instructions for the complete technical system must also always be followed.

NOTICE

- ▶ Read the documentation carefully before usage.
- ▶ The documentation must be accessible to the operating and maintenance staff at all times.
- ▶ Keep documentation up to date after every addition or update.

CAUTION

Overloading components due to incorrect pressure settings.

Risk of minor injury.

- Pay attention to the maximum operating pressure of the pump, valves and fittings.
- Always monitor the pressure gauge when setting and changing the pressure.

Purity and filtering of the hydraulic fluid

Fine contamination can significantly impair the function of the product. Contamination can cause irreparable damage.

Examples of fine contamination include:

- Swarf
- Rubber particles from hoses and seals
- Dirt due to assembly and maintenance
- Mechanical debris
- Chemical ageing of the hydraulic fluid

NOTICE

New hydraulic fluid from the manufacturer may not have the required purity.

Damage to the product is possible.

- ▶ Filter new hydraulic fluid to a high quality when filling.
- ▶ Do not mix hydraulic fluids. Always use hydraulic fluid that is from the same manufacturer, of the same type, and with the same viscosity properties.

For smooth operation, pay attention to the cleanliness level of the hydraulic fluid (cleanliness level see Chapter 3, "Parameters").

Additionally applicable document: [D 5488/1 Oil recommendations](#)

5.4 Maintenance information

Check regularly (at least once a year) by visual inspection whether the hydraulic connections are damaged. If external leakages are found, shut down and repair the system.

Clean the surface of the device regularly (at least once a year) (dust deposits and dirt).

6 Other information

6.1 Layout instructions

Direct Current (DC):

The voltage particulars (solenoid specification) should match the supply voltage actually available (a lower supply voltage will lead to a reduction of force, a higher supply voltage will lead to an unacceptably high temperature at the coil, tolerance ± 5 to 10 %).

Alternating Current (AC):

The voltage particulars should match the supply voltage actually available (50/60 Hz). An appropriate rectifier circuit in the line connector yields the required solenoid voltage of approx. 0.9 UAC-2V. The direct current solenoids to be used can be found on the table (for instance at 110 V AC 50 Hz a solenoid with UN = 98 V DC).

For block circuits and ambient temperatures higher than 40 °C, design the layout so that solenoid valves directly adjacent to each other are not actuated concurrently for extended periods of time. (Rel. duty cycle max. 40 % duty cycle)

6.2 Accessories, spare and individual parts

To purchase spare parts, please see [HAWE Hydraulik interactive contact map](#).
