**1****Overview of directional seated valve type BVE**

Directional seated valves are a type of directional valve. Their function is to direct the flow of hydraulic medium in certain directions, therefore connecting the relevant connections, or shutting off the flow with zero leakage. By this means they control the movement of the actuators in a hydraulic system.

The directional seated valve type BVE is a screw-in valve. 2/2 and 3/2 directional seated valves are available. All connections can be subjected to the same pressures.

Type BVE 1F according to D 7921 F can be used for highly viscous media (e.g. lubricating grease).

Appropriate connection blocks enable direct pipe connection or manifold mounting.

**Features and advantages**

- Any flow direction
- Large range of plug options
- Long service life thanks to hardened seat
- Large number of single connection blocks

**Intended applications**

- Construction and construction materials machinery
- Handling and assembly technology
- Machines for forestry purposes

*Directional seated valve type BVE 3*

## 2 Available versions

### Ordering example

BVE 3	Z	-G 24	T	-1/2	-B 2,5
					2.6 "Orifices/check valves (additional elements)"
					2.5 "Single connection block"
					2.4 "Actuating solenoid addition (type BVE 1 only)"
					2.3 "Actuating solenoid"
					2.2 "Circuit symbol"
					2.1 "Basic type and size"

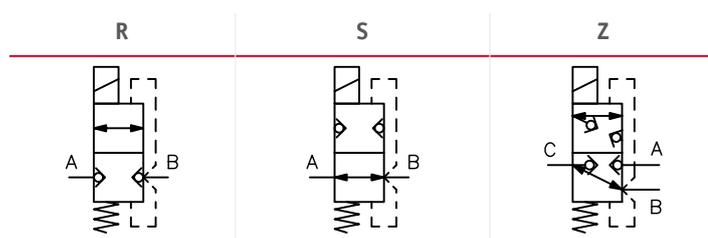

### 2.1 Basic type and size

Type	Flow rate $Q_{max}$ (l/min)	Pressure $p_{max}$ (bar)
BVE 1	20	500
BVE 3	70	400
BVE 5	300	400

#### NOTICE

Operating pressures depend on solenoid version see Chapter 3.1, "General data"

### 2.2 Circuit symbol

#### NOTICE

BVE 5 circuit symbol R only.

## 2.3 Actuating solenoid

### ! NOTICE

The specifications regarding the IP protection class apply for versions featuring a properly assembled male connector.

### ! NOTICE

**For electrical connection according to ATEX:**

Observe electrical data for explosion-proof solenoids, see [Chapter 3.5.1, "Electrical data for explosion-proof solenoids"](#).

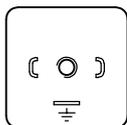

### ! NOTICE

**Solenoid for electrical connection according to ATEX in combination with connection blocks/sub-plates:**

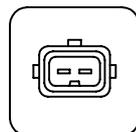

When using a connection block that you have prepared yourself: The minimum volume of the connection block must not be undershot, see [Chapter 3.5.1, "Electrical data for explosion-proof solenoids"](#).

## 3 Parameters

### 3.1 General data

<b>Designation</b>	2/2, 3/2-way directional seated valves
<b>Design</b>	Cone-seated valve
<b>Model</b>	Screw-in valve
<b>Material</b>	<p>steel</p> <ul style="list-style-type: none"> <li>▪ Coil housing zinc-nickel coated</li> <li>▪ Valve housing/solenoid pipe type BVE 1, BVE 5 zinc-nickel coated, type BVE 3 nitrided</li> <li>▪ Connection blocks zinc-nickel coated</li> <li>▪ Connection block type BVE 3... -1/2 electrogalvanised</li> </ul>
<b>Attachment</b>	Screw-in valve, on connection block for manifold mounting, pipe connection
<b>Overlap for 3/2-way directional valves</b>	Negative, transition from one flow direction to the other is completed only in the stroke end position. During switching, all ports are open to each other.
<b>Tightening torque</b>	see Chapter 4, "Dimensions"
<b>Installation position</b>	Any
<b>Flow direction A, B, C</b>	Any, according to circuit symbol Chapter 2.2, "Circuit symbol"
<b>Hydraulic fluid</b>	<p>Hydraulic fluid, according to DIN 51 524 Parts 1 to 3; ISO VG 10 to 68 according to DIN ISO 3448</p> <p>Viscosity range: 4 - 800 mm<sup>2</sup>/s</p> <p>Optimal operating range: approx. 10 - 200 mm<sup>2</sup>/s</p> <p>Also suitable for biologically degradable hydraulic fluids type HEPG (polyalkylene glycol) and HEES (synthetic ester) at operating temperatures up to approx. +70°C.</p>
<b>Cleanliness level</b>	<p><b>ISO 4406</b></p> <hr style="width: 20%; margin-left: 0;"/> <p>21/18/15...19/17/13</p>
<b>Temperatures</b>	<p>Environment: approx. -40 to +80 °C, hydraulic fluid: -25 to +80 °C, pay attention to the viscosity range.</p> <p>Start temperature: down to -40 °C is permissible (take account of the start viscosities!), as long as the steady-state temperature is at least 20 K higher during subsequent operation.</p> <p>Biologically degradable hydraulic fluids: note manufacturer specifications. With consideration for the seal compatibility, not above +70°C.</p> <div style="border: 1px solid gray; padding: 10px; margin-top: 10px;"> <p><b>! NOTICE</b></p> <p>Observe the correct duty cycle, see Chapter 3.5, "Electrical data"</p> <p>Observe the restrictions for explosion-proof solenoids.</p> </div>

#### **! NOTICE**

Version for highly viscous media (e.g. lubricating grease), see D 7921 F.

Type BVE 1 R(S) is suitable for mounting hole for proportional valves type PMVE 1 according to D 8143.

Standard seals NBR/TPU, versions with special seals (PYD operating pressure  $p_{max} = 250$  bar) available on request.

### 3.2 Pressure and volumetric flow

Operating pressure $p_{max}$	X, G, L, WG, AMP, DT, M, S	X 24/8W, G 24/8W, L 24/8W X 24/18W, G 24/18W, L 24/18W

### 3.5.1 Electrical data for explosion-proof solenoids

**! NOTICE**

When using solenoids for potentially explosive atmospheres, it is essential to observe the operating instructions [B ATEX](#) and the separate operating instructions for the respective solenoid.

Refer to the applicable operating instructions B 22 (EX22) for operating thresholds, classifications, electrical parameters and electrical connections.

Valves arranged individually or next to one another with HAWE connection block for manifold mounting, mounted on a sub-plate

**Connection blocks in row per solenoid**

Coding	Circuit symbol	Min. volume of HAWE connection block (mm <sup>3</sup> )	Min. volume of customer-specific sub-plate (mm <sup>3</sup> )
- P	R, S	58 050	94 170
	Z	112 230	39 990
- P1	R, S	82 320	69 900
- P BP	Z	114 400	37 820
- P-WN	R, S	49 000	103 220
- P-VP	R, S	72 000	80 220
	Z	108 000	44 220

**NOTICE**

**Solenoid for electrical connection according to ATEX in combination with connection blocks/sub-plates:**

When using a single connection block with coding P, P1, P-VP, P-WN: Observe the minimum volume of the additional sub-plate to be used, only for use with anti-twist protection, see Chapter 4.1, "Screw-in valve type BVE 1".

**CAUTION**

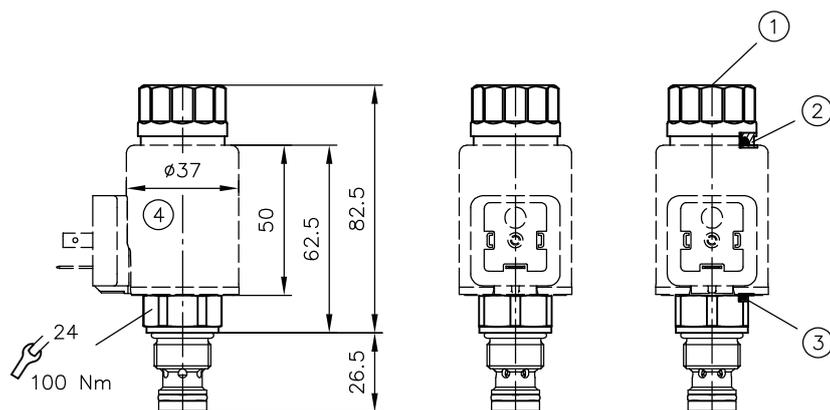

- Take particular care during assembly and dismantling work!
- The surfaces must not be damaged under any circumstances!

## 4 Dimensions

All dimensions in mm, subject to change.

### 4.1 Screw-in valve type BVE 1

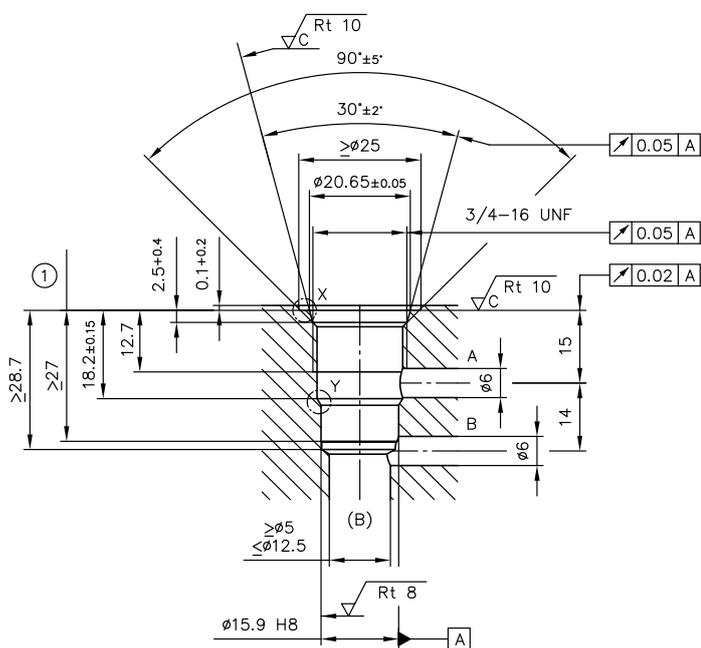

#### BVE 1 R(S)

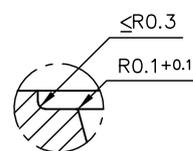

Solenoid versions and solenoid addition  
see Chapter 4.1.1, "Solenoid versions"

- 1 Manual override
- 2 Sealing between coil and nut
- 3 Sealing between coil and valve cartridge
- 4 Excitation system can be pivoted through 360°

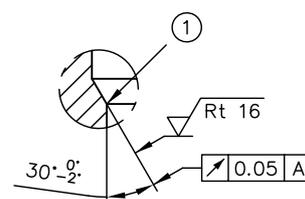

#### Mounting hole

#### Detail X

#### Detail Y

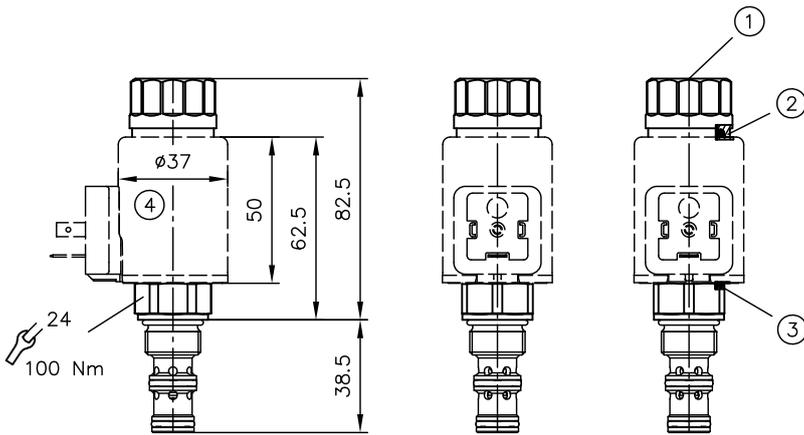

- 1 Round off edge max. R0.2

- 1 Reaming depth

#### NOTICE

For tools for creating the mounting hole see Chapter 6.4, "Additional elements".

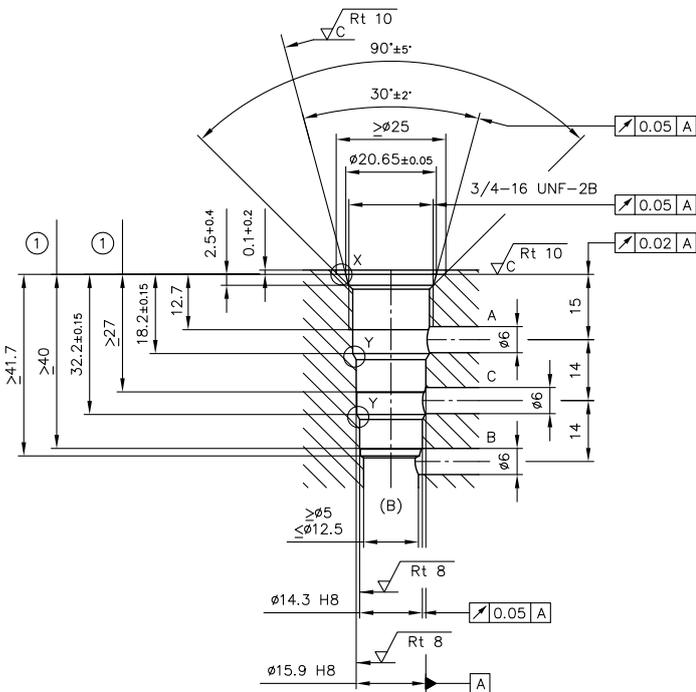

**BVE 1 Z**

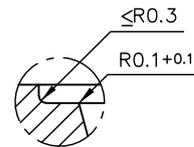

Solenoid versions and solenoid addition see Chapter 4.1.1, "Solenoid versions"

- 1 Manual override
- 2 Sealing between coil and nut
- 3 Sealing between coil and valve cartridge
- 4 Excitation system can be pivoted through 360°

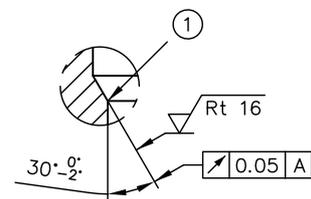

**Mounting hole**

**Detail X**

**Detail Y**

- 1 Round off edge max. R0.2

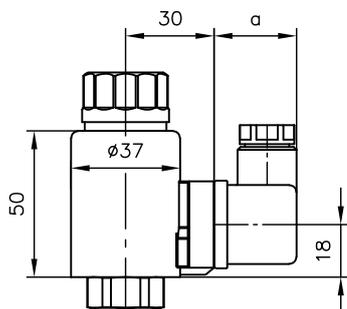

- 1 Reaming depth

**NOTICE**

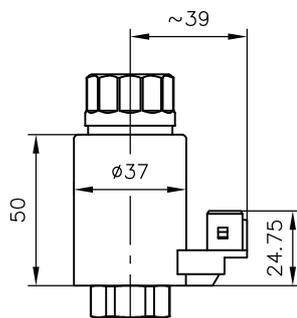

For tools for creating the mounting hole see Chapter 6.4, "Additional elements".

**5****Installation, operation and maintenance information**

Observe the document B 5488 "General operating instructions for assembly, commissioning, and maintenance."

**5.1 Intended use**

This product is intended exclusively for hydraulic applications (fluid technology).

The user must observe the safety measures and warnings in this document.

**Essential requirements for the product to function correctly and safely:**

- ▶ All information in this documentation must be observed. This applies in particular to all safety measures and warnings.
- ▶ The product must only be assembled and put into operation by specialist personnel.
- ▶ The product must only be operated within the specified technical parameters described in detail in this document.
- ▶ All components must be suitable for the operating conditions when using an assembly.
- ▶ The operating instructions for the components, assemblies and the specific complete system must also always be observed.

**If the product can no longer be operated safely:**

1. Remove the product from operation and mark it accordingly.
  - ✓ It is then not permitted to continue using or operating the product.

**5.2 Assembly information**

The product must only be installed in the complete system with standard and compliant connection components (screw fittings, hoses, pipes, fixtures etc.).

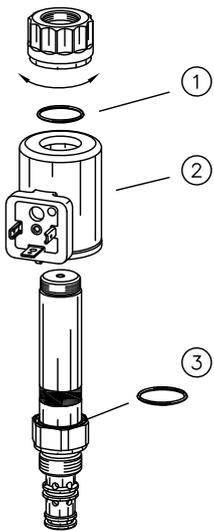

The product must be shut down correctly prior to disassembly (in particular in combination with hydraulic accumulators).

**DANGER****Sudden movement of the hydraulic drives when disassembled incorrectly**

Risk of serious injury or death

- ▶ Depressurise the hydraulic system.
- ▶ Perform safety measures in preparation for maintenance.

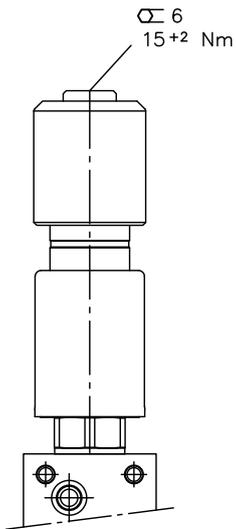

### 5.2.1 Replacing the solenoid

- 1 O-ring 18.75x2.62 NBR 90 Sh
- 2 Solenoid
- 3 O-ring 20.00x1.50 NBR 90 Sh

Solenoid: see Chapter 6.5, "Order coding for individual parts"

### 5.2.2 Adjusting the plug position

Plug position can be adjusted individually:

- ▶ Undo the manual override at the size 6 hex socket.
- ▶ Position the coil.
- ▶ Re-tighten the manual override at the size 6 hex socket.

## 5.3 Operating instructions

Observe product configuration and pressure/flow rate.

The statements and technical parameters in this document must be strictly observed.

The instructions for the complete technical system must also always be followed.

### ! NOTICE

- ▶ Read the documentation carefully before usage.
- ▶ The documentation must be accessible to the operating and maintenance staff at all times.
- ▶ Keep documentation up to date after every addition or update.

### ⚠ CAUTION

#### **Overloading components due to incorrect pressure settings.**

Risk of minor injury. Parts may burst or fly off, and uncontrolled leakage of hydraulic fluid.

- Pay attention to the maximum operating pressure of the pump, valves and fittings.
- Always monitor the pressure gauge when setting and changing the pressure.

## Purity and filtering of the hydraulic fluid

Fine contamination can significantly impair the function of the product. Contamination can cause irreparable damage.

### Examples of fine contamination include:

- Swarf
- Rubber particles from hoses and seals
- Dirt due to assembly and maintenance
- Mechanical debris
- Chemical ageing of the hydraulic fluid

### ! NOTICE

#### **New hydraulic fluid from the manufacturer may not have the required purity.**

Damage to the product is possible.

- ▶ Filter new hydraulic fluid to a high quality when filling.
- ▶ Do not mix hydraulic fluids. Always use hydraulic fluid that is from the same manufacturer, of the same type, and with the same viscosity properties.

For smooth operation, pay attention to the cleanliness level of the hydraulic fluid (cleanliness level see Chapter 3, "Parameters").

Additionally applicable document: [D 5488/1](#) oil recommendations

## 5.4 Maintenance information

Check regularly (at least once a year) by visual inspection whether the hydraulic connections are damaged. If external leakages are found, shut down and repair the system.

Clean the surface of the device regularly (at least once a year) (dust deposits and dirt).

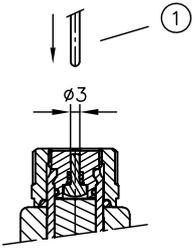

Check that the product is securely fastened in the mounting hole at regular intervals, but at least once per year.

## 6 Other information

### 6.1 Creating the mounting hole

see Chapter 4, "Dimensions"

### 6.2 Manual override

To actuate the valve:

- Use a steel pin or screwdriver etc. to depress the brass bolt (visible on the upper face).

Actuation forces	BVE 1	BVE 3	BVE 5
100 bar	160 N	200 N	350 N
200 bar	260 N	300 N	525 N
300 bar	340 N	380 N	700 N
400 bar	420 N	460 N	845 N
500 bar	520 N	--	--

1 Auxiliary tool for actuation (do not use parts with sharp edges)

#### NOTICE

Manual override with coding T or T1 is recommended for higher system pressures.

## 6.3 Accessories, spare and individual parts

To purchase spare parts, please see [HAWE Hydraulik interactive contact map](#).

### 6.3.1 Blocking (coding B)

In the case of circuit symbol R, blocking can be used for maintenance/set-up operation.

- Operating mode: normal operation
  - Solenoid (replaceable solenoid!) mounted
  - Blocking nut acts as a fixing element for the solenoid
  - Blocking is ineffective
  - Valve is actuated via the solenoid
- Maintenance/set-up operation mode
  - Solenoid (replaceable solenoid!) not mounted
  - Blocking nut screwed on hand-tight
  - Valve is in the actuated state

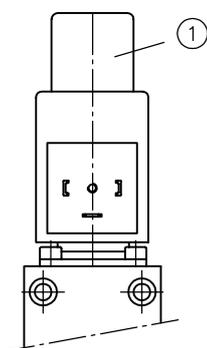

#### **DANGER**

#### **Sudden movement of the hydraulic drives**

Risk of serious injury or death.

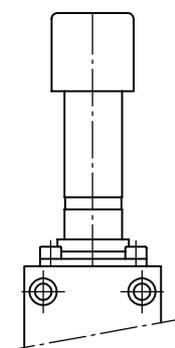

Prevent unintended movements by the consumers!

#### Normal operation

1 Blocking nut

#### Maintenance/set-up operation

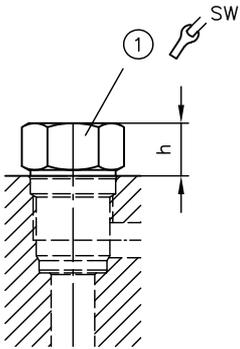

## 6.4 Additional elements

### Tapped plugs

The mounting holes can be sealed with tapped plugs if necessary; for example, if the assembly of standardised basic bodies is to be carried out with or without screw-in valves as required.
